1. Go to the **Databases** tab on the library home page [latrobe.edu.au/library](http://latrobe.edu.au/library). Select **Medline** from the A-Z list, or from the drop-down menu under **Health Sciences** choose **Speech Pathology** and select **Medline** from the list.

2. Search for the topic you are interested in. You can search using keywords, or select **Map Term to Subject Heading** to search using Medical Subject Headings (MeSH). For further help with the Medline database, see the [Health Databases LibGuide](http://latrobe.edu.au/library).

3. Look for **Limits** (located below the search box) and click on **Additional Limits** to see all the available options.
4. Scroll down to the Clinical Queries section and select **Qualitative (best balance of sensitivity and specificity)** from the list. Select **Limit A Search** at the bottom of the page.

This applies a limit to your search which is designed to filter your results to locate qualitative studies.
Clinical Queries limits are based upon search strategies developed at McMaster University. The search strategy applied for qualitative research is:

\[ \text{interview:.mp. OR experience:.mp. OR qualitative.tw.} \]

5. Look through your results for terms such as “lived experience”, “perceptions”, “views” or “attitudes”.
