Open a node to explore references coded within it

To see what data has been coded within a node select Nodes from the left hand navigation pane, then double-click on the desired node. You may need to click the + symbol to expand a parent node to see child nodes.

You can see what sources were coded and click on the link to open a source

You can set options to display more or less of the context around a reference

The Reference tab is displayed by default, it shows all the text content coded at the node

Click on these other tabs to see content from pictures, PDFs, audio, video and datasets

You can select content and ‘code on’ to new nodes
